

A NEW STANDARD OF EXCELLENCE: *Auragens Achieves AABB Accreditation*

Why This Matters for Every Current and Future Patient

At Auragens, we have always believed that regenerative medicine should be held to the **highest possible standards.**

Not just in science.

Not just in patient outcomes.

But in **every process, every protocol, every quality control measure, and every decision that ultimately impacts patient safety.**

Today, we are proud to announce a major milestone in that commitment:

Auragens has achieved accreditation through the Association for the Advancement of Blood & Biotherapies (AABB).

While accreditation announcements are common in healthcare, this achievement is fundamentally different.

For those familiar with cellular therapy, regenerative medicine, and biologics, **AABB accreditation represents far more than a certificate on a wall.**

It represents a commitment to:

- Operational excellence
- Patient safety
- Accountability
- Rigorous quality systems
- Traceability
- Continuous improvement

Most importantly, it provides patients with confidence that the cells they receive have been managed through systems designed to meet **some of the most demanding standards in the field.**

What Is AABB?

For more than 75 years, AABB has helped establish and advance standards for blood, cellular therapies, biotherapies, and related healthcare services.

Its accreditation programs are recognized throughout the healthcare industry and are widely respected for their rigor, independence, and focus on quality management.

AABB standards emphasize:

- ✓ Comprehensive quality systems
- ✓ Process validation
- ✓ Chain of custody and chain of identity
- ✓ Documentation and traceability
- ✓ Corrective and preventive action programs
- ✓ Personnel training and competency
- ✓ Laboratory oversight
- ✓ Risk management
- ✓ Continuous quality improvement

These standards are designed to ensure that complex biologic products are handled **safely, consistently, and responsibly** from beginning to end.

In regenerative medicine, where patients are receiving **living biologics** rather than traditional pharmaceuticals, these systems are particularly important.

ACCREDITED

Blood Services | Cellular Therapies | Biotherapies | Related Healthcare Services

AABB accreditation represents more than compliance—it represents a commitment to the highest standards of quality, safety, and patient care.

What Is AABB?

For more than 75 years, AABB has helped establish and advance standards for blood, cellular therapies, biotherapies, and related healthcare services.

Its accreditation programs are recognized throughout the healthcare industry and are widely respected for their rigor, independence, and focus on quality management.

AABB standards *emphasize*:

- Comprehensive quality systems
- Chain of custody and chain of identity
- Corrective and preventive action programs
- Laboratory oversight
- Continuous quality improvement
- Process validation
- Documentation and traceability
- Personnel training and competency
- Risk management

These standards are designed to ensure that complex biologic products are handled safely, consistently, and responsibly from beginning to end.

In regenerative medicine, where patients are receiving living biologics rather than traditional pharmaceuticals, **these systems are particularly important.**

Why AABB Accreditation Is So Difficult to Achieve

Many organizations speak about quality.

Far fewer are willing to have their quality systems independently scrutinized.

Achieving AABB accreditation requires extensive preparation, documentation, validation, auditing, staff training, and operational discipline.

AABB

Every aspect of a facility's processes must be evaluated, documented, and capable of standing up to external review.

Inspectors examine not only what an organization does, but how consistently and reliably it does it.

- Policies must be written.**
- Procedures must be followed.**
- Records must be maintained.**
- Deviations must be investigated.**
- Corrective actions must be documented.**

Quality cannot exist as a marketing message. It must exist as a system. That is why accreditation is not simply earned through intent. It is earned through execution.

Accreditation matters to everyone we serve.

- New Patients**
Confidence in safe, high-quality care.
- Previous Patients**
Reassurance that we never stop raising the bar.
- Medical Professionals**
A trusted partner committed to the highest standards.

That is why accreditation is not simply earned through intent.

It is earned through execution.

Why This Is Especially Significant in Regenerative Medicine

Regenerative medicine is one of the most exciting frontiers in healthcare.

It is also one of the most complex.

Patients are often evaluating clinics based on websites, testimonials, or treatment descriptions without understanding what occurs behind the scenes.

Yet the most important factors influencing quality frequently happen long before a patient ever enters a treatment room.

LIVING BIOLOGICS

RIGOROUS STANDARDS

QUALITY YOU CAN TRUST

BETTER OUTCOMES FOR PATIENTS

Questions patients should be asking include:

How are cells sourced?

How is chain of custody maintained?

How are biologics tested?

What quality controls are in place?

How are deviations handled?

Who oversees laboratory operations?

How is consistency maintained from patient to patient?

These are the questions that accreditation programs are designed to address.

Because in regenerative medicine, the quality of the process directly influences the quality of the product.

Why This Is Especially Significant in Regenerative Medicine

Regenerative medicine is one of the most exciting frontiers in healthcare.

These are the questions that accreditation programs are designed to address.

Because in regenerative medicine, the quality of the process directly influences the quality of the product.

The Auragens Difference: A Complete Regenerative Medicine Platform

What makes this achievement particularly meaningful is that Auragens is not simply a laboratory.

Nor are we simply a treatment center.

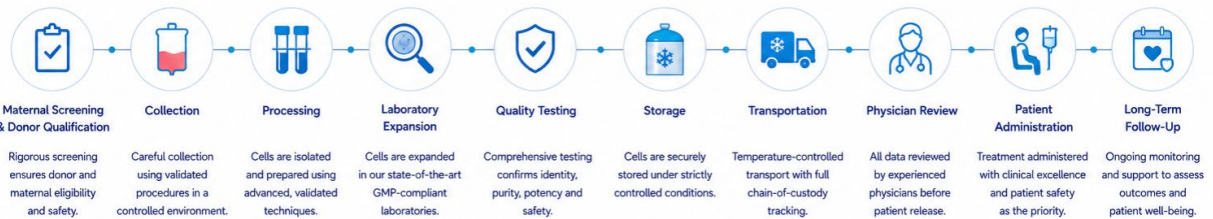

We have built a fully integrated regenerative medicine platform.

- ✓ Every step matters.
- ✓ Every handoff matters.
- ✓ Every quality checkpoint matters.

Our systems begin long before a treatment is administered.

The process starts during maternal screening and donor qualification. It continues through every critical step to ensure the highest standards of safety, quality, and care.

By combining advanced laboratory capabilities with clinical excellence, Auragens has created a level of oversight that is uncommon within the regenerative medicine landscape.

The result is a system designed to **maximize consistency, accountability, and patient confidence.**

The Auragens Difference: A Complete Regenerative Medicine Platform

What makes this achievement particularly meaningful is that Auragens is not simply a laboratory. Nor are we simply a treatment center.

We have built a fully integrated regenerative medicine platform.

The process starts during maternal screening and donor qualification.

It continues through collection, processing, laboratory expansion, quality testing, storage, transportation, physician review, patient administration, and long-term follow-up.

****Every step matters. Every handoff matters. Every quality checkpoint matters.****

By combining advanced laboratory capabilities with clinical excellence, Auragens has created a level of oversight that is uncommon within the regenerative medicine landscape.

The result is a system designed to maximize consistency, accountability, and patient confidence.

Why Patients Should Care

Many patients understandably focus on one question:
"Will this treatment help me?"

The reality is that **living biologics are not commodities.**

While that is an important question, another question may be even more important:
"How were these cells handled before they ever reached me?"

They are not **interchangeable** products.

Their quality is influenced by **every step** of the process.

The Donor
 Carefully screened and qualified to ensure safety and suitability.

The Laboratory
 Advanced facilities and expert handling at every stage of processing and expansion.

The Quality Systems
 Comprehensive policies, procedures, and controls that drive consistency and reliability.

The Testing
 Rigorous testing to verify identity, purity, potency, and safety.

The Storage
 Precisely controlled conditions to maintain cell viability and integrity.

The Transportation
 Temperature-controlled chain-of-custody transport with full traceability.

The Administration
 Delivered by qualified clinicians following established protocols and standards.

When patients choose a provider, they are not simply choosing a treatment.
They are choosing the systems that stand behind that treatment.

AABB accreditation provides **independent validation** that those systems exist and operate according to rigorous standards.

Why Patients Should Care

Many patients understandably focus on one question:

"Will this treatment help me?"

While that is an important question, another question may be even more important:

"How were these cells handled before they ever reached me?"

The reality is that living biologics are not commodities.

They are not interchangeable products.

Their quality is influenced by every step of the process.

The donor.

AABB accreditation provides independent validation that those systems exist and operate according to rigorous standards.

Raising the Bar for Regenerative Medicine

Our pursuit of AABB accreditation was never about recognition. **It was about responsibility.**

Patients place **extraordinary trust in us.** That trust deserves more than promises.

- It deserves processes.
- It deserves accountability.
- It deserves transparency.
- It deserves a relentless commitment to quality.

As regenerative medicine continues to evolve, we believe the future belongs to organizations that **embrace higher standards, stronger oversight, and greater scientific rigor.**

This accreditation is an **important milestone** in that journey.

But more importantly, it reflects something that has always guided Auragens: **A belief that patients deserve the highest level of care, quality, and confidence possible.**

Because excellence in regenerative medicine is **not defined by what happens during treatment. It is defined by everything that happens before it.**

Raising the Bar for Regenerative Medicine

Our pursuit of AABB accreditation was never about recognition.

It was about responsibility.

Patients place extraordinary trust in us.

That trust deserves more than promises.

****It deserves processes.**

It deserves accountability.

It deserves transparency.

And it deserves a relentless commitment to quality.**

As regenerative medicine continues to evolve, we believe the future belongs to organizations that embrace:

- Higher standards
- Stronger oversight
- Greater scientific rigor

This accreditation is an important milestone in that journey.

But more importantly, it reflects something that has always guided Auragens:

A belief that patients deserve the highest level of care, quality, and confidence possible.

Because excellence in regenerative medicine is not defined by what happens during treatment. It is defined by everything that happens before it.

Thank You
for Being Part of Our Journey!

This achievement reflects the dedication of our entire team, our valued partners, and most importantly, **the patients who inspire our mission** every day.

 Built on Quality Uncompromising standards at every step.	 Driven by Science Evidence-based approach. Better outcomes.	 Focused on Patients Your trust fuels our purpose.	 Stronger Together Collaborating for a healthier future.	 Elevating the Future Raising the bar for regenerative medicine.
---	--	--	--	--

 Together, we are **advancing what's possible** and delivering the highest level of care, quality, and confidence our patients deserve.

 **This is more than an accreditation.**
It's a commitment to excellence—today and always.
